

The Synesis Difference

Bringing Together People, Business and Technology Since 1994™

The Idea

While developing strategic plans for large corporations, Synesis' founders recognized a major disconnect between people, processes and new technologies. If this was true for large businesses, then the same applied for medium and small ones.

This concept was based on the fundamental principle that a synergy of people, business and technology is required for any successful company. We believe in this so much that we trademarked the phrase. It drives our project approach and company strategy.

Mission & Vision

Our Mission

Create value for our clients by providing and supporting key technology and business systems.

Our Vision

Offer the same innovative concepts and opportunities for growth to small and midsize businesses that are readily available to larger corporations.

Why Partner With

Synesis offers a unique set of systems development and integration capabilities with expertise in Enterprise Resource Planning (ERP), Quality Management Systems (QMS) and Manufacturing Execution Systems (MES).

Typical system integration companies span only one of these business segments and therefore have a limited perspective of your entire business. Synesis understands manufacturing operations and systems technology requirements from the board room to the shop floor.

Next Generation Solutions & Products for an Always-On 360° World
